

PERSON1

Dialysis
Dependent
end stage
kidney
diseas

To evaluate
the harm of
vitamin k

(CKD) is an
independent
risk factor for
adverse
cardiovascular

PERSON2

the growing
quality of dialysis
and management
of chronic kidney
disease (CKD)

Prediction
Of kidney
Failure

involving
hemodialysis
patients

PERSON3

Chronic kidney
disease (CKD) is a
progressive loss in
kidney function
over a period of
months or years

The main indicator
of kidney function is
your blood level of
creatinine, a waste
product of the body
produced

If CKD is detected
early and managed
appropriately, the
deterioration in
kidney function can
be slowed or even
stopped

Kidney function is
best measured by an
indicator called GFR
(Glomerular Filtration
Rate) which measures
the blood fltration
rate by kidneys
